

T'Sou-ke Solar Gathering Themes

1.) First Nations leading the way - towards a renewable energy future. "First Nations have experience in living on this continent for thousands of years without use of fossil fuels. It is now appropriate that First Nations demonstrate how to live without fossil fuels once again" Chief Gordon Planes, T'Sou-ke Nation.

- 2.) Conservation Challenge: 10% reduction in energy consumption
- First Nations
 - Schools
 - Municipalities
 - Universities etc.

T'Sou-ke Smart Energy Group will help communities and organizations to design, implement and achieve this goal.

3.) Resiliency - creating resiliency to impending energy scarcity and climate changes by incorporating renewable energy. Remote communities and off grid are most affected with rising energy costs. Create greater autonomy with off grid options using localized power instead of centralized power.

4.) Training and Economic Development - T'Sou-ke trainees have worked on Solar Hot Water and Photovoltaic installations. Permanent local jobs have already been created in this fast growing industry.

5.) Incorporation of Art into Technology - art makes it your own, and continues the tradition of integrating new technology and beautifying it in everyday life and tools.
